

Comfort: Nothing compares to floor heating, it simply creates the best ambiance of any heating choice!

At floor level: You want to heat the area from where you are, not from high up on the wall or from the ceiling. Remember, heat rises!

Evenly distributed throughout the floor area: Enjoy radiant heating with no overly cold or hot spots. No gusts of hot air blasting out from a single point!

Speed: Response time can be as low as 30 minutes depending on the type of floor heating.

Cost effective: Our thermostats ensure heaters only turn on only when required, resulting in huge savings on running costs. Heating can be independently controlled per area, enabling areas not in use to be switched off. Where a floor has significant thermal mass and your electricity provider offers time-of-use electricity rates, heat can be stored when electricity is cheap to carry warmth during peak electricity tariffs. Ongoing costs can also be largely offset through use of solar energy and even more so with batteries.

Low capital cost: Not only does Coldbuster floor heating cost far less to supply than other heating alternatives, but labour is minimal. This also means quick installation!

With Coldbuster, the heat rises naturally from the floor upwards and is distributed evenly throughout the room.

Ceiling mounted heaters warm the upper body only, leaving feet cold.

Programmable thermostats: Regulate comfort levels whenever/however you like, with different weekday/weekend routines, morning/night routines.

Durable & reliable: Stringent testing forms part of the manufacturing process for all Coldbuster products.

Maintenance free: There are no moving parts or wear and tear. Coldbuster floor heater kits require no maintenance.

Long warranty: Heaters come with 15-year warranties, thermostats 3 years.

Wall mounted heaters force air around the room inefficiently, creating cold draughts.

Safety: No high voltage or hot surfaces. The heater element is fully earthed & waterproofed, offering protection against fire and shock (must be connected to an RCD). No combustible gases.

Unobtrusive: Nothing visible and nothing to store. No sound, no smell, nothing hot to touch. No outside venting required.

Allergy & environmentally friendly: Our heaters do not emit volatile organic compounds (typical in air circulation units) or nitrogen oxides (typical in gas heating) and do not produce smoke, fumes, dust or electromagnetic radiation.

Easy installation: The installation process is simple. All Coldbuster floor heaters are sold as DIY kits, with an easy to follow installation guide. Installation videos are available online and we are but a phone call or email away! Special tools or floor heating experience are not required.
